

Exercise : Session Management with Shopping Cart

Task: Implement a simple shopping cart using JSP session management.

- Create `products.jsp` displaying 3-5 products with:
 - Product name, price, and "Add to Cart" button
- Create `cart.jsp` that:
 - Maintains cart items in session using `HttpSession`
 - Shows all items in cart with quantities
 - Allows removing items from cart
 - Calculates and displays total price
- Create `checkout.jsp` showing final order summary

Key concepts: `HttpSession` object, `session.setAttribute()`, `session.getAttribute()`, `session.removeAttribute()`
