

# Simple Student Registration System

## Objective

Create a student registration system using MVC pattern where:

- **Model:** Student class with properties (id, name, email, course)
- **View:** JSP pages for input form and display
- **Controller:** Servlet to handle requests

## Requirements

1. **Model** (Student.java):
  - Create a Student class with: id, name, email, course
  - Include constructor, getters/setters
2. **Controller** (StudentServlet.java):
  - doPost(): Receive form data, create Student object, store in request scope, forward to display page
  - doGet(): Show registration form
3. **Views:**
  - register.jsp: Form with fields for name, email, course dropdown
  - display.jsp: Display student details from the model
