Exercise : Basic JSP Page with Form Handling

Task: Create a JSP page that collects user information and displays it on another page.

- Create `input.jsp` with a form containing:

  o Name (text field)
  o Email (text field)
  o Age (number field)
  o Submit button
- Create `display.jsp` that:

  o Retrieves the form parameters
  o Displays the submitted information in a formatted way
  o Shows a different message if age is under 18

Key concepts: JSP scriptlets/expressions, request.getParameter(), HTML forms
